Pace modem router

Pace Router Login Follow these instructions to login to your Pace Router. Connect router cable to your Laptop or Computer. Alternatively use your wireless network. Recommendation - It's best to use a wired connection while setting up the Pace router. This avoids the risk of suddenly being logged off when saving your changes. Open your web browser of choice and type IP address of your Pace router in the address bar. You can find the ip address on the back of your router. Now enter the default username and password of your router by accessing the admin panel. If you don't have your username and password, you can try one of the default passwords for Pace routers. Pace Routers Help If you can't log in to your router, then you are probably entering the wrong username or password. Remember to make a note of both after you've changed them. Forgot Login Password? Try hard resetting your router login. To do this, press and hold the small black button found at the back your router for around 10 seconds. This will reset your router to the factory settings. Router login page not loading? If the login page is not loading, make sure the device you are using is connected to the wi-fi. You will also need to check if the wrong router IP address is set as the default one. Sometimes pages, may have issues loading, or problems with speed. In this case, your network is probably using a different IP address. If this occurs, consult our IP address router list, and locate the right address. If you need any help, check out our tutorial on how to find your router's IP address. FAQ Brands 1. What is the username and password of Pace routers? The majority of the Pace routers have a default username of admin and a default password of admin 2. What is the default password of a Pace router? The majority of the Pace routers have the default password admin 3. What is the default IP of a Pace router? The majority of the Pace routers use 192.168.1.254 as the default IP address 4. How to log in to a Pace router? First, type the router's IP address in your browser address bar, Then, enter your router username and password, and then click OK or LOGIN. Above, you can find the most probable default credentials. 5. How to troubleshoot a Pace router? First check if the WAN cable is connected to the correct port of the router which is labelled as "WAN". Then check if you are connected either by using the Wi-Fi network or a LAN cable connected to a LAN-labelled port of the router. 6. How to reset Pace router login password? Resetting the admin password of most Pace routers is simple and requires pushing a reset button, located on the router itself, for 5 to 10 seconds. © 1996-2014, Amazon.com, Inc. or its affiliates Installation & order statusInternet connections, web browsing & securityTroubleshooting & repairWi-Fi gateways & equipment Based on cutting-edge 4x4 MU-MIMO Wi-Fi technology, the 5268AC intelligent gateway is the optimum solution for multi-service delivery. Unrivaled Performance for all Next-Generation Services Based on cutting-edge 4x4 MU-MIMO Wi-Fi technology, the 5268AC intelligent gateway is the optimum solution for multi-service (voice, video and data) delivery, offering service providers a single, unified platform to serve all aspects of their delivery network. Superior Wireless Performance Maximum performance 4x4 5 GHz 802.11ac Engineered for maximum performance, the 5268AC integrated 4x4 5 GHz 802.11ac wireless access point allows service providers to securely deliver high-quality HD video and data to any location in a subscriber's home. Using the most up-to-date wireless standard (802.11ac), residential customers receive traditional "wired" levels of service and quality, while service providers enjoy the benefits of shortened installation times and more flexibility in how they deploy IPTV and OTT services. Put simply, it enables the fastest network speeds possible, while future-proofing service provider investment. Eliminate cold spots ARRIS virtually eliminates wireless "cold spots" around the home using high-powered 802.11ac 4x4 MIMO wireless technology. This guarantees superior wireless coverage to every device around the home, and ensures subscribers can enjoy seamless connectivity in every room at the maximum possible speed. In the 2.4 GHz band, the gateway uses 802.11n 2x2 MIMO technology at over four times the transmit power of competitive 2.4 GHz products that traditionally transmit at less than 100 mW. This means greater flexibility and optimal performance regardless of the wireless technology. Increase coverage Across every Wi-Fi band, the 5268AC gateway has excellent receiver sensitivity and optimized antenna designs that boost performance when compared to typical wireless designs. Better range throughout the local network area means higher customer satisfaction with extended wireless coverage and up to 33% more capacity. The additional capacity enables subscribers to consume more video and ultimately have a better user experience. Fast, Secure, Reliable Recognizing the need for extremely fast, reliable and high-performance local network connectivity, the 5268AC includes a variety of wired and wireless connection options. In addition to high-power 2.4 GHz 802.11n, the gateway also includes a concurrent, state-of-the-art 5 GHz 4x4 802.11ac access point. This enables service providers to deliver reliable wireless video services and data at the highest possible speeds. CUT YOUR MONTHLY TV BILL NOW! Try Amazon Music Unlimited Free Trial For providers who prefer wired connectivity, the 5268AC includes both Gigabit Ethernet as well as HomePNA over coax for "no new wiring" installation. Optional two-line voice services are provided via integrated VoIP. The 5268AC residential gateway also features bonded ADSL2+/VDSL2 modem technology allowing service providers to increase rate and reach with their existing broadband infrastructure. No-fuss Management Finally, to ensure continuous delivery of services, the 5268AC supports an optional internal Li-ion battery pack and is fully manageable utilizing the industry-standard TR-069 management protocol. This enables service providers to easily inspect network configuration and rapidly troubleshoot connectivity and service problems. ADSL/VDSL Pair Bonding The 5268AC gateway simplifies deployment for service providers; for DSL broadband connectivity, it terminates both single-pair and bonded copper connections and automatically detects the appropriate profile. Its highly optimized xDSL interface supports a wide variety of xDSL profiles from ADSL2+ to bonded, high-speed VDSL2. Providers with fiber infrastructure can connect the output of an Optical Network Terminal (ONT) directly to the unit's dedicated, Gigabit Ethernet broadband port. Gigabit Speeds The 5268AC's integrated Gigabit Ethernet switch and dedicated Gigabit Ethernet WAN port enables service providers to deliver next-generation services such as interactive payTV and video on-demand. The dual-core CPU and hardware accelerated routing translates into exceptional performance for every application, enhanced by quality of service management for voice, IPTV and data. Integrated Voice over IP The 5268AC provides built-in VoIP capabilities to support today's diverse voice needs. Additional VoIP capabilities include a full SIP ALG and back-to-back IP user agent (proxy) to support additional ATA adapters. An optional, replaceable integrated Li-ion battery pack is available to ensure continuity of video services during a power outage. Streamlined Management The 5268AC intelligent gateway drastically simplifies both gateway and application management; remote management is supported with any TR-069-compliant auto-configuration server, such as the industry-leading ECO Manage device management system. ECO Manage gives providers a valuable insight into the customer's network, enabling them to remotely configure, manage and troubleshoot deployed gateway devices, eliminating costly truck rolls and lengthy customer care calls. Additionally, IP-based services can be remotely managed using the web-based ECO Service Management tools. ECO Service Management can reduce operational expenses, shorten time-to-market for next-generation services, and increase customer satisfaction. For information on replacement batteries for the 5268AC residential gateway, including link to purchase, please visit our "modems accessories" category. Best-in-class 4x4 5 GHz 802.11ac Wi-Fi for video, voice and data delivery Dual-core processor with hardware accelerated routing for exceptional performance ADSL2+/VDSL2 Pair Bonding Advanced Quality of Service for Managing Voice, IPTV, and Data Traffic HomePNA interface for video distribution throughout the home Intelligent service delivery platform Carrier-Quality TR-069, TR-098 and TR-104 Network Management Optional Li-ion Battery for Service Assurance Low Total Cost of Ownership
